

# **Dormi raises the bar for smartphone age baby monitors**

4/14/2015, Prague: Sleekbit introduces a major revamp of *Dormi*, the baby monitor that has already been redefining connectivity and usability expectations. Updated with real-time hardware accelerated video streaming, chromebook support, and sophisticated noise level monitoring, Dormi is now sporting a stylish new look.

## **Google's material design and next gen features backported to old devices**

Dormi will stream audio and video whether you have Internet access (Wi-Fi, mobile data) or not (Wi-Fi AP/Hotspot, Wi-Fi Direct). Designed for the newest versions of Android, it will work all the way back to android 2.3 devices to give that old phone in your drawer a second lease of life - including hardware accelerated video recording and playback, and the new material design UI.

## **Built for Android**

The many advanced features of the app (e.g. missed calls and texts on the device used in child mode are reported on the parent device) are matched with a surprising attention to detail both in functionality, as well as look and feel.

## **Product info**
